Ti

- 1 1. Methods for the production of mixed alcohols including the steps of:
- 2 using a sulfided, nanosized transition metal catalyst selected from Group VI metals;
- nanosizing the Group VI transition metal catalyst;
- suspending the catalyst in a solvent to form a slurry;
- 5 contacting said slurry with gases including carbon monoxide and hydrogen at a
- temperature in the range of about 250 to about 325°C and at a pressure in the range of about 500
- ។ to about 3000 psig, to thereby produce mixed alcohols.
 - 2. The method of claim 1/wherein the nanosized Group VI transition metal catalysts is sulfided prior to its use in producing mixed alcohols from gases including carbon monoxide and hydrogen.
- Nanosized Group VI transition metal catalysts for use in producing mixed alcohols from 2 gases including carbon monoxide and hydrogen.
 - 1 4. The nanosized Group VI transition metal catalysts of claim 3 including sulfur
 - 1 5. All methods for the production of mixed alcohols taught herein.
 - 1 6. All catalysts for the production of mixed alcohols taught herein.
